". . . this series is invaluable for workers at all levels of cell biology." —NATURE

METHODS IN CELL BIOLOGY

Edited by DAVID M. PRESCOTT

METHODS IN CELL BIOLOGY (formerly *Methods in Cell Physiology*) presents detailed descriptions of methods and techniques now in use in the field of cell biology research—techniques which have not been published in full detail elsewhere in the literature. Each volume features state-of-the-art reviews that bring the reader up to date on the most current innovations and refinements of prevailing techniques, as well as discussions of standardized methods that frequently reveal a more efficient means of studying current problems. Descriptions of each technique are so complete that even cell biologists with little or no experience in a particular area can apply the technique to their work.

> *"The editor, D. M. Prescott, is to be congratulated on the production of a thoroughly useful volume."* **—NATURE**
>
> *". . . will be gladly received not only by those working in the field of physiology of the cell but . . . will become a useful manual for all cytologists and biologists."* **—FOLIA MORPHOLOGICA**
>
> *"Something new or hard to find is included in nearly every chapter. Altogether the volume makes quite a useful collection and is recommended for advanced graduate students, research scientists, and any library which tries to keep an up-to-date working collection for cell biologists or microbiologists."* **—ASM NEWS**

Complete information on each volume in the series is available on request.
